Identification

crawl_out
S. H. Webber

(Note that the following is an Abstract, which should be replaced by a full description at a later time.)

Function of Entry:

To force control out of ring 0 when certain ring 0 errors have occurred.

Calling Sequence for Entry:

```
call crawl_out (name,mc_ptr);
```

Declaration of Arguments:

```
dc1 name char(*),  
    mc_ptr ptr;
```

Description of Arguments:

`name' is the condition name for the fault to be signalled - i.e., the fault which caused the crawl_out.

`mc_ptr' is a pointer to the machine condition stored at the time of the ring 0 fault.
