Identification

TDSM_A
D. L. Stone

(Note that the following is an Abstract, which should be replaced by a full description at a later time.)

Function of Entry:

attach - initializes interim tape facility and assigns a dcw list for the tape controller

order - allows tape read/write mode to be set, write eof, check for ready and setting of hardware mailbox status ptrs.

unmount - unloads tape

detach - releases dcw lists

Calling Sequence for Entry:

```
call tds_m_a$attach (ioname, drive, ev_chn, error)
call tds_m_a$order (ioname, command, error)
call tds_m_a$unmount (ioname, error)
call tds_m_a$detach;
```

Declaration of Arguments:

```
dcl ioname char(*)
    drive char(1),                /*digit of drive unit
                                0-7*/
    ev_chn bit(70),              /*event id created and
                                passed to GIM by
                                tds_m_a*/
    error fixed bin(17),         /*return error code*/
    command fixed bin(17);      /*which order is desired*/
```

Description of Arguments:
