FROM: M. S. Hodges
DATE: May 23, 1974
SUBJECT: Multics Change Requests

Attached are copies of Multics Change Requests which were approved from May 1 - 15, 1974

Multics Project internal working documentation. Not to be reproduced or distributed outside the Multics Project.

MULTICS CHANGE REQUEST		MCR <u>486</u> Page <u>1</u> of <u>1</u> Pages
TITLE: <u>mstrds command</u>	STATUS	DATE
AUTHOR: <u>Bill Silver</u>	Written	<u>04/23/74</u>
SOURCE: (if external) e.g., "User", "Marketing"	Approved A	5/7/74
	Rejected	
	Postponed	
	Withdrawn	
	Expires	11/7/74

CLASSIFICATION	JUSTIFICATION	Replaced by proposal MCR _____
<input type="checkbox"/> Incompatible Change	Marketing Requirement	Implemented in System _____
<input checked="" type="checkbox"/> Extension	Conformance to Standard	Objections/Comments: This is an interim command for use during change in size of standard record length.
<input type="checkbox"/> Restriction	Increased Consistency	
<input checked="" type="checkbox"/> Performance Improvement	Simplification	
<input type="checkbox"/> Reliability Improvement	<input checked="" type="checkbox"/> Generalization	
	Bug Fix	

Use these headings: REASONS, SUMMARY, IMPLICATIONS, DETAILED PROPOSAL (Optional)

REASONS:

A new command, mstrds, has been written. It allows a user to specify the record size when writing a Multics standard tape.

IMPLICATIONS:

This command will work only with the new version of tape. It should be used with care since other Multics sites may not have the version of tape which can read long (1024 words of data) records.

Detailed Proposal:

If mstrds is called with no arguments it displays the current record data size for the user's process. The following arguments can be used to change the record data size.

- "-lg" or "-long" will set the record data size to 1024 words.
- "-st" or "-short" will set the record data size to 256 words.

TITLE: Addition of -unique option to sort_seg command	STATUS	DATE
	Written	4-25
AUTHOR: <u>Ross F. Klinger</u>	Approved	<i>H 5/71</i>
	Rejected	
SOURCE: (if external) e.g., "User", "Marketing" MIT - PDD	Postponed	
	Withdrawn	
	Expires	<i>11/71</i>

CLASSIFICATION	JUSTIFICATION	
		Replaced by proposal MCR _____
<input type="checkbox"/> Incompatible Change	<input type="checkbox"/> Marketing Requirement	Implemented in System _____
<input checked="" type="checkbox"/> Extension	<input type="checkbox"/> Conformance to Standard	Objections/Comments:
<input type="checkbox"/> Restriction	<input type="checkbox"/> Increased Consistency	
<input type="checkbox"/> Performance Improvement	<input type="checkbox"/> Simplification	
<input type="checkbox"/> Reliability Improvement	<input checked="" type="checkbox"/> Generalization	
<input type="checkbox"/>	<input type="checkbox"/> Bug Fix	

Use these headings: REASONS, SUMMARY, IMPLICATIONS, DETAILED PROPOSAL (Optional)

REASONS: It has been suggested (by Jerry Stern, DSO) that the object of many sorts is the elimination of duplicate lines from a file. sort_seg currently does not have this capability; however, the implementation of such a function is trivial, and can be done in a manner such that no additional overhead is forced on the user not requiring the feature.

SUMMARY: Add a new control option, -unique (-uq), to the sort_seg command. (MCR 107) Add a new bit to the control bit string of the sort_seg subroutine.

IMPLICATIONS: None - the documentation for sort_seg and sort_seg_ has not yet been submitted for publication.

MULTICS CHANGE REQUEST		MCR <u>490</u> Page <u>1</u> of <u>2</u> Pages
TITLE: Bug fixes to Debug	STATUS	DATE
	Written	04/28
AUTHOR: <u>Susan Barr</u>	Approved #	5/7
	Rejected	
SOURCE: (if external) e.g., "User", "Marketing"	Postponed	
	Withdrawn	
	Expires	11/7

CLASSIFICATION	JUSTIFICATION	Replaced by proposal MCR _____
Incompatible Change	Marketing Requirement	Implemented in System _____
Extension	Conformance to Standard	Objections/Comments: 1. Don't do l-c; change documentation.
Restriction	Increased Consistency	
Performance Improvement	<input checked="" type="checkbox"/> Simplification	
Reliability Improvement	Generalization	
	<input checked="" type="checkbox"/> unreported Bug Fix	

Use these headings: REASONS, SUMMARY, IMPLICATIONS, DETAILED PROPOSAL (Optional)

REASONS:

1. Printing Instructions:
 - a) The line number is printed at the wrong place if there are multiword instructions.
 - b) "eis" instructions are not disassembled.
 - c) Instead of printing the number of instructions requested, debug prints that many words.
 - d) There are some instructions missing from the op code table.
2. Breaks:
 - a) All the global break commands cause a reference through a null pointer if there are no breaks set.
 - b) The break skip command (.bsl n) does not work if there is a condition line with the break.
 - c) If the caller tries to set a regular break at the same location as the last temporary break an invalid break results.
 - d) Breaks can not be set at the start of eis instructions.
3. Assigning values to variables:
 - a) Precision is lost on assigning floating point data with a large fraction part. Each digit of the fraction was converted to a floating point number and then divided by the appropriate power of ten.
 - b) When reading several floating point number to fill an array, the minus sign is ignored if the previous number had no fraction. (i.e., -10. -10 would be read -10. +10.)

- c) Debug overwrites its storage if the user tries to read a character string of more than 80 characters.
4. Printing Variables:
- a) Debug is not compatible with the new `ioa_` which requires that the control argument matched the descriptors. Debug uses a fixed binary variable based on a pointer to print floating point data.
 - b) Varying character strings used as arguments are not printed correctly.
5. Debug searches the directory in which a program was compiled for the source segment. It should search the working directory as well.
6. Debug has no error handlers and the user returns to command level when an error occurs in the debugger itself.

SUMMARY:

- 1. The disassembler routine was rewritten using portions of the disassembler from the pl 1 compiler. The `op_mnemonic` table of the compiler was used instead of the `debug` table.
- 3. The assignment of arithmetic values is done using `assign_` which uses a better algorithm.
- 6. An "anyother" handler was set up which uses the default error handler to print an error message and then reads a debug input line. The "anyother" condition must be reverted or disabled when leaving the debugger. (e.g., when issuing `..` and `:=`).

MULTICS CHANGE REQUEST

MCR 492
Page 1 of 2 Pages

TITLE: Modify initialization to ease the "high water mark" problem.

STATUS	DATE
Written	04/30/
Approved A	5/7/
Rejected	

AUTHOR: Steve Webber

SOURCE: (if external) e.g., "User", "Marketing"

Postponed	
Withdrawn	
Expires	11/7/

CLASSIFICATION	JUSTIFICATION	
<input type="checkbox"/> Incompatible Change	Marketing Requirement	Replaced by proposal MCR _____ Implemented in System _____
<input type="checkbox"/> Extension	Conformance to Standard	Objections/Comments:
<input type="checkbox"/> Restriction	Increased Consistency	
<input type="checkbox"/> Performance Improvement	Simplification	
<input type="checkbox"/> Reliability Improvement	Generalization	
<input type="checkbox"/>	Bug Fix	
<input type="checkbox"/>	Allow system to expand when necessary	
<input checked="" type="checkbox"/>		

Use these headings: REASONS, SUMMARY, IMPLICATIONS, DETAILED PROPOSAL (Optional)

REASONS: Due to the method that the system is initialized it is possible to run out of core memory early in initialization. This MCR proposes a method of minimizing this difficulty. The problem only occurs if there is 128k of memory.

SUMMARY: The technique proposed is to move several procedures and data bases from collection 1 to collection 2.

IMPLICATIONS: If the change is done in a clever way there can be a breakage of about 1/2k to 1k of core that will be lost. In the ideal case breakage can be reduced to near zero, but it should never exceed 1k.

DETAIL DESCRIPTION:
1. The following modules and data bases will be moved to collection 2.

- emergency_shutdown
 - d_355_data
 - bound_355_wired
 - bound_iom_wired
 - bound_tc_wired
 - pxss
 - tc_data
 - tty_ctl
 - tty_buf
 - disk_traffic_data
- These total to about 30k.

2. Changes will have to be made to the software to change the initialization of the 355 software and certain other I/O modules.
3. The initialization "waiting" mechanism used by page control will have to be slightly changed.
4. The initialization of disk_traffic_data will have to^{be} slightly changed.
5. The programs and read only data bases above should be bound together to minimize breakage.
6. The fabrication of the length of tc_data will be removed from bootstrap1.
7. The I/O buffer tty_buf should be forced in abs_usable core.

<input type="checkbox"/> Extension	<input type="checkbox"/> Conformance to Standard	Objections/Comments: (At MIT)
<input type="checkbox"/> Restriction	<input type="checkbox"/> Increased Consistency	
<input type="checkbox"/> Performance Improvement	<input type="checkbox"/> Simplification	
<input type="checkbox"/> Reliability Improvement	<input type="checkbox"/> Generalization	
<input type="checkbox"/>	<input checked="" type="checkbox"/> Bug Fix	
<input type="checkbox"/>	<input type="checkbox"/>	

Use these headings: REASONS, SUMMARY, IMPLICATIONS, DETAILED PROPOSAL (Optional)

REASONS: An obsolete version of pll_operators_ was installed at MIT leaving several bugs unfixed and creating a minor inconsistency with the pll compiler in regards to bug 1044.

SUMMARY: Fixes basic bug: 026
PL/I bugs: 1044, 1065, 1078, 1082, 1083

any_to_any_, pll_operators_ and power_ must be replaced.

Bugs 1065 (conversion to short unpacked string target) and 1082 (assignment of null string to varying string) are especially important.

MULTICS CHANGE REQUEST		MCR 494 Page 1 of 1 Pages
TITLE: Repair Problems Introduced by Change to Tape Controller Specifications		STATUS
		DATE
AUTHOR: Noel I. Morris		Written 5/21/72
		Approved H 5/17/72
SOURCE: (if external) e.g., "User", "Marketing" Internal		Rejected
		Postponed
		Withdrawn
		Expires 11/7/72

CLASSIFICATION	JUSTIFICATION	Replaced by proposal MCR _____
Incompatible Change	Marketing Requirement	Implemented in System _____
Extension	Conformance to Standard	Objections/Comments:
Restriction	Increased Consistency	
Performance Improvement	Simplification	
Reliability Improvement	Generalization	
	<input checked="" type="checkbox"/> Unreported Bug Fix	

Use these headings: REASONS, SUMMARY, IMPLICATIONS, DETAILED PROPOSAL (Optional)

REASONS:

A change was made to the MTS500 Magnetic Tape Controller specifications. This change causes end of tape status to be returned on all tape writes which follow the detection of the end of tape reflector. Formerly, only the first such write caused end of tape status to be returned.

Since the ntape package treats the end of tape status as an error, BOS SAVE runs off the end of SAVE tapes.

Summary:

The BOS ntape package will be modified to treat end of tape status differently. Other tape writing programs in BOS and Multics will have to be audited to see if the end of tape condition is handled properly.

Implications:

MTS500 controllers running level H1 firmware will be incapable of performing BOS SAVES until the repaired software is installed. If SAVES must be performed on the MTS500, the controller must be running level G firmware until the repairs are made.

Reliability Improvement	Generalization	
	x Bug Fix 264	
	x Help detect bug 277	

Use these headings: REASONS, SUMMARY, IMPLICATIONS, DETAILED PROPOSAL (Optional)

REASONS:

1. I/O daemon was sometimes repeating same request over and over because of failure to delete a request (Bug 264).
2. I/O coordinator sometimes takes mysterious recursive linkage errors (Bug 277).

SUMMARY:

1. If an unsuccessful attempt is made to delete a message from a queue, drop the queue.
2. Correct handling of faults so spurious recursion will not occur; cause SCU data to be written onto "log_output" stream if actual recursion occurs.

IMPLICATIONS:

Already installed as an emergency installation.

<input type="checkbox"/> Reliability Improvement	<input type="checkbox"/> Generalization	
<input type="checkbox"/>	<input type="checkbox"/> Bug Fix	
<input type="checkbox"/>	<input type="checkbox"/>	

Use these headings: REASONS, SUMMARY, IMPLICATIONS, DETAILED PROPOSAL (Optional)

REASONS: Every hardcore installation is currently accompanied by the re-installation and re-assembly of active_all_rings_data, for the sole purpose of changing the system ID. In addition to being useless work, the complete updating procedure invoked on this module is devoid of semantic significance.

SUMMARY: Provide keyword and command option for generate_mst to insert the system ID in the copy of active_all_rings_data being written at system generation time.

IMPLICATIONS: Change the documentation for gm.

DETAILED PROPOSAL: The optional keyword "sysid" or "sys_id" followed by a colon and the name of an internal symbol in the segment under which this keyword appears is put in (any number) of header entries in the hardcore header. When encountered by the generator, a copy of the segment will be made, and the system ID will replace the two words at that symbol in the copied segment. The system ID used is defaultedly the same as the name which, suffixed by ".header", is sought as the name of the header. If the "-sysid" (or "-sys_id") option is used in the generate_mst command, the following argument is used as the system ID.

Although it might be argued that the current proposal is something of a kludge, I contend, in the absence of some "sophisticated" mechanism such as writing the ID into bootstrap1, making a new type of SLT entry or MST header word, etc., that the proposed mechanism is viable, simple, and compatible.

<input checked="" type="checkbox"/> Incompatible	<input checked="" type="checkbox"/> Marketing	Replaced by proposal MCR
<input type="checkbox"/> Change	<input type="checkbox"/> Requirement	Implemented in System
<input type="checkbox"/> Extension	<input type="checkbox"/> to Standard	Objections/Comments:
<input type="checkbox"/> Restriction	<input type="checkbox"/> Consistency	
<input checked="" type="checkbox"/> Performance	<input type="checkbox"/> Increased	
<input type="checkbox"/> Improvement	<input type="checkbox"/> Simplification	
<input type="checkbox"/> Reliability	<input checked="" type="checkbox"/> Generalization	
<input type="checkbox"/> Improvement	<input type="checkbox"/> Bug Fix	

Use these headings: REASONS, SUMMARY, IMPLICATIONS, and optionally DETAILED PROPOSAL

REASONS:

- 1) Changing the sort algorithm used by sort_seg_ (MCR 107) from combination of Shell and radix exchange sorts, performed by an intern procedure, to the QUICKERSORT algorithm, performed by sort_items_indirect results in a marked decrease in execution time. This decrease ranges fr 15% for a 1 record segment to 50% for a 30 record segment.
- 2) sort_seg_ requires that sort_items_indirect_ acce adjustable-length character strings.
- 3) The current sort_items_indirect_ (and sort_items_) entry sequenc necessitate an inordinate amount of argument manipulation due to alignme considerations. Their current data comparison methods execute superfluous cmpc instruction (= 80 microsec. for a 100 character string) 50% of the comparisons. The sort is currently accomplished using recursive inner procedure which can be made non-recursive.
- 4) Eliminating these inefficiencies reduces the execution time sort_items_ and sort_items_indirect_ by a factor of 4.

SUMMARY:

- 1) Change sort_seg_ to use sort_items_indirect_.
- 2) Change the internals of sort_items_ and sort_items_indirect_ produce more efficient code.
- 3) Add an entry point (adj_char) which accepts adjustable-lang character strings to sort_items_indirect_.

4) Change the calling sequences of sort_items_ and sort_items_indirect_ to accept pointers to structures containing aligned arrays.

5) Remove sort_items_ and sort_items_indirect_ from bound_utility_tools_ in system_library_tools, and create a new bound segment, bound_sort_routines_ in system_library_standard, which will contain sort_items_, sort_items_indirect_, sort_seg, and sort_seg_.

IMPLICATIONS:

1) User interface - minimal, as no system routines currently reference sort_items_ or sort_items_indirect_.

2) Performance

a) sort_seg and sort_seg_ will operate as much as 4 times faster than sort_file. The initial versions operated, at best, only twice as fast.

b) sort_items_ and sort_items_indirect_ will operate 4 times faster than the currently installed versions.

DETAILED PROPOSAL: see MTB-068 for changes made to the user interfaces of sort_items_ and sort_items_indirect_.
