

NAME

`mxascii` – Re-processes reloaded Multics segments

SYNOPSIS

`mxascii` *9bit-file* [*8bit-file*]

DESCRIPTION

converts a UNIX file that was reloaded by `mxload` with 9bit conversion into the version that would have been created had it been reloaded with 8bit conversion. If *8bit-file* is not specified, the converted file is written to standard output.

SEE ALSO

`mxload` *User's Manual*, `mxload(1)`
